FERTILITY CARE CLOSE TO HOME

The journey to parenthood is among the most challenging experiences in life, especially when things don't go according to plan. At Boston IVF, we understand the uncertainty that infertility and family-building can bring. Many of us have personally experienced it ourselves.

Our new, state-of-the-art fertility center in Bedford, New Hampshire offers a team of experts who will stand alongside you, guide you, and provide the most innovative and effective treatments available today.

Led by award-winning fertility doctors **Kristen Wright, MD** and **Thomas L. Toth, MD** — our sole mission is to help you become a parent in the shortest time possible.

“New Hampshire residents have long deserved a comprehensive, in-state fertility provider.”

— *Kristen Wright, MD*

NEW HAMPSHIRE'S ONLY IVF CENTER

At Boston IVF, we seamlessly blend customized care with advanced fertility treatments to fit each patient's unique circumstance. Utilizing a myriad of homegrown reproductive technologies and a vast library of analysis, we identify unique trends that help lead to an accurate diagnosis and better chances for success.

OUR IVF LABORATORY

Our Scientific Team

Our new center features an ultra-modern IVF laboratory, complete with 20+ scientists, embryologists, and technologists who work behind the scenes to optimize your success.

Our Embryo Development

Using state-of-the-art incubators and techniques, we create favorable conditions for embryos to thrive and become high-quality “candidates” for implantation.

Our Embryo Testing

We utilize groundbreaking embryonic gene analysis and testing to select the best time (down to a 12-hour window) to transfer an embryo into the uterus for maximum success.

Our Fertility Research

Our scientists and doctors have published hundreds of landmark scientific papers and clinical studies that help advance present-day and future care.

Our Fertility Innovation

We have played a role in many New England “fertility firsts” — including the 1st IVF/ICSI birth, the 1st birth from frozen egg, and the 1st to assist a lesbian couple conceive via IVF.
